

Windham Community Choice Aggregation (CCA) Understanding Electricity Options and Renewable Energy Content

Overview

The Windham Community Choice Aggregation (CCA) program allows residents and businesses in Windham, New Hampshire to purchase electricity supply as a group. This program is designed to provide competitive electricity rates while offering customers the ability to choose how much renewable energy is included in their electricity supply.

Electricity will still be delivered by your local utility (Eversource or Liberty), and you will continue to receive your electric bill from your utility. The only change is the company that supplies the electricity portion of your bill.

Windham Electricity Supply Options

Windham Basic	Windham Default CCA	Windham 50%	Windham 100%
0% NH Class I REC	5% NH Class I REC	50% NH Class I REC	100% NH Class I REC
\$0.10206 per kWh	\$0.10406 per kWh	\$0.12206 per kWh	\$0.13406 per kWh
Lowest cost option	Default program option	Higher renewable content	Maximum renewable energy

What is an NH Class I REC?

A Renewable Energy Certificate (REC) represents proof that electricity was generated from a renewable energy source such as wind, solar, biomass, or certain types of hydroelectric power. In New Hampshire, 'Class I' RECs represent renewable energy produced from newer renewable energy technologies that meet the state's Renewable Portfolio Standard (RPS).

When electricity suppliers purchase NH Class I RECs, they are supporting the generation of renewable energy in the regional power grid. The percentage shown in each option represents how much of the electricity supply is matched with renewable energy certificates.

Explanation of Each Option

Windham Basic – 0% NH Class I REC

This option has the lowest price because it does not include additional renewable energy beyond the minimum required by state law. It is designed for customers who want the lowest possible electricity supply rate.

Windham Default CCA – 5% NH Class I REC

This is the standard option for the program. **Customers will be automatically enrolled in this option unless they choose a different one or opt out.** It includes a small amount of additional renewable energy while maintaining a competitive electricity price.

Windham 50% – 50% NH Class I REC

This option significantly increases the amount of renewable energy supporting your electricity supply. Half of the electricity associated with your usage will be matched with renewable energy certificates.

Windham 100% – 100% NH Class I REC

This option provides the highest renewable energy support. The electricity supply associated with your usage is fully matched with renewable energy certificates, helping support renewable energy generation in the region.

Important Notes for Customers

- Participation in the Windham CCA program is voluntary.
- You may opt out of the program at any time with no penalty.
- Your utility company (Eversource or Liberty) will still deliver electricity and manage outages.
- Only the electricity supply portion of your bill changes under the program.
