

Virtual Net Metering & Community Solar

Access the financial benefits of renewable energy. No installation required.

Not every organization has the ability to develop onsite renewable energy. Lease constraints, facility type, location, or capital priorities can make on-site projects impractical. But the financial benefits of renewable energy, including bill credits, rate stability, and sustainability progress, should still be accessible. Virtual net metering and community solar programs make that possible, without construction, asset ownership, or operational complexity.

Our Role in Your Strategy

Freedom Energy's Renewable Program Team identifies and evaluates virtual net metering and community solar opportunities on behalf of our clients. We locate optimal offsite projects, conduct independent economic analysis, and manage the full contracting and administrative setup process. Our clients gain access to renewable energy bill credits through a straightforward subscription model, guided by advisors who know the market and represent their interests exclusively.

What Our Advisory Partnership Delivers

- Project sourcing and opportunity identification
- Independent economic and savings analysis
- Contract review and negotiation support
- Administrative enrollment and setup coordination
- Ongoing program performance monitoring

Key Benefits

- Meaningful reduction in energy spend via bill credits
- No onsite construction, assets, or infrastructure required
- Support for local and regional renewable energy projects
- Accessible entry point for sustainability commitments
- Fully managed from sourcing through enrollment

What We Need From You

- A brief discovery conversation
- 12 months of utility bills
- Energy usage data (kWh / location / rate class)

How Virtual Net Metering Works

Access the financial benefits of renewable energy. No installation required.

Virtual Net Metering makes renewable energy accessible to any organization — regardless of facility type, lease constraints, or capital priorities. You don't need to own or install anything to start receiving the financial benefits of clean energy.

Renewable Energy is Generated

An offsite solar, hydro, or other renewable energy project produces clean electricity and feeds it to the grid.

Credits Are Allocated to Subscribers

Participants receive a proportional share of the energy produced as credits applied directly to their utility bill.

Your Bill is Reduced

Credits offset your electricity charges each billing cycle, with no onsite equipment, no construction, and no operational burden.

Why Virtual Net Metering?

Not every organization can develop renewable energy onsite. Organizations that can't develop onsite renewable projects due to lease constraints, facility type, or capital priorities can still access the financial and sustainability benefits of renewable energy through a simple subscription model.

Freedom Energy manages the entire process, from project sourcing and economic analysis through contracting, enrollment, and ongoing performance monitoring.
